Important features and dates

The Master's Program in Economic Policy at the University of Siegen, MEPS is designed to prepare its students for the challenges which an increasingly globalizing economy imposes on businesses, economic policy and society. It endows its participants with the economic competence and analytical skills for a successful career in administration, government, national and international associations, and global business. To achieve this goal the MEPS program not only offers a profound training in economic theory and econometric techniques but also enables its students to independently analyze questions of practical and political relevance empirically.

The master's program has a strong international focus, it explicitly addresses an international audience and is therefore taught (apart from some non-obligatory courses) in English.

The MEPS program endows its students with a sound knowledge in economics, econometrics and empirics, bringing them to the frontiers of current research. Furthermore, due to its quantitative orientation, it also trains the students' analytical and logical problem-solving skills and prepares them either for a successful (international) professional career and/or an academic career in high-level economic research.
